

S03 - XL is Different

Vorne manufacturing improvement made easy

What Makes Vorne XL Different?

The [XL Productivity Appliance™](#) is a truly unique product. Here are five specific things about XL that will help ensure your project is a success.

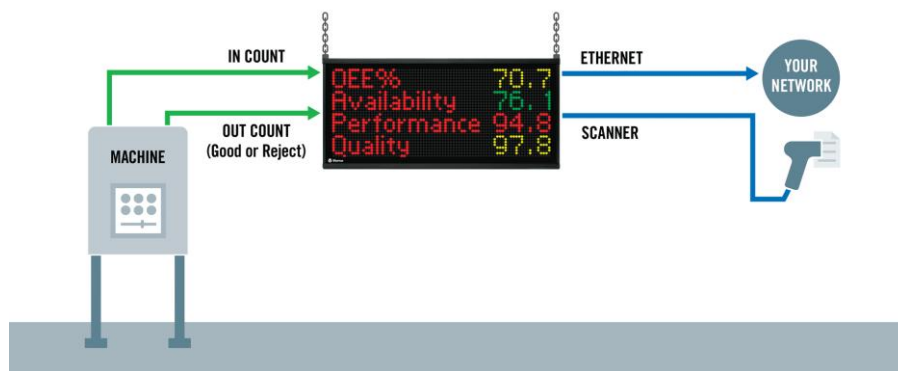

Low Cost

XL is a standard off-the-shelf product. Think of it as a swiss army knife for manufacturing improvement. It includes everything you need integrated into one device. No consultants, no monthly fees, no maintenance or support contracts, unlimited users, and unlimited technical support. That means an incredibly low total cost of ownership for you.

Technical Support	\$0
Maintenance Contracts	\$0
Monthly Fees	\$0
Fees for Additional Users	\$0
Software Upgrades	\$0
Data Storage Fees	\$0
Total Extra Fees	\$0

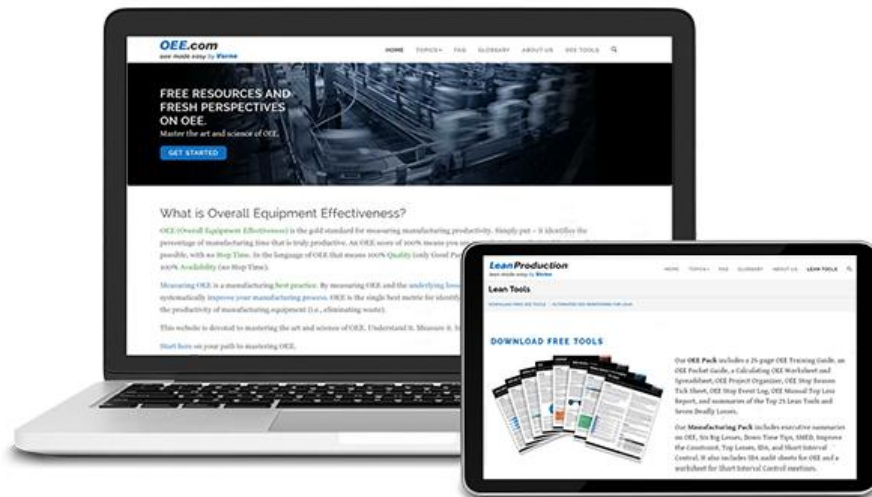

Simple Deployment

XL is easy to install. In most cases you can use count signals from existing sensors. We provide a barcode scanner for operators; you provide a connection to your network. XL can be installed by your electrician. IT will be delighted to learn that there are no servers or software to install and that your data sits safely behind your firewall. And if you do have any questions or need assistance, you are backed by our expert technical support.

Deep Expertise

XL provides you with a foundation of rich and highly accurate data. Vorne helps you transform that data into results. We've spent 45 years helping companies monitor and improve manufacturing productivity. Our knowledge and experience are thoroughly integrated into every aspect of XL.

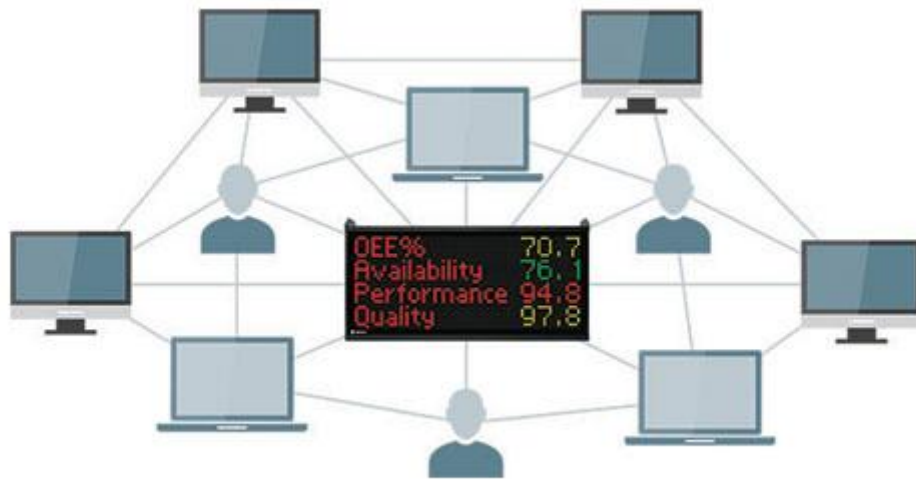

Immediate Results

XL includes a plant floor scoreboard that provides real-time production targets for your operators so they can “win the shift”. Integrated reports and live dashboards provide immediate insights for supervisors. Rolled up and trended reporting provides a strategic view for managers. Instant information and insights for all levels of your company. A shared information foundation that drives coordinated decisions and improved results.

Future Proof

XL scales simply and seamlessly by adding more devices to your network (one per production line). When you are ready for the next step, partner toolkits make it easy to integrate XL to PLCs, MES, and ERP systems. Regular software updates ensure that XL is an investment that not only provides an immediate return – it continues to grow in value with new features and functionality.
